

Purchasing, pricing and lot-cost truth

A visual operating guide for purchase orders, GRN inward, master MRP, searchable selection and legacy cost readiness. Screens show the verified Marble Park release using isolated training data.

01 Master MRP required; floor optional	02 Purchase order Supplier rate + UOM + discount + optional GST	03 GRN PO cost inherited; manual rate captured	04 Inventory lot Net pre-tax unit cost becomes the cost truth	05 Quote MRP read-only; no false zero when setup is missing
---	--	---	--	--

What this protects No stock lot is received without a positive cost. A PO-linked receipt cannot secretly replace its approved PO cost.	What remains flexible GST is optional on both PO and quote. Supplier rate can be entered in BOX, PC or the governed purchase UOM.	What users see Fast searchable selectors, clear setup queues and actionable errors. Missing MRP never becomes a misleading Rs. 0 quote.
--	---	---

One commercial meaning per field

MRP is a selling reference. Floor price is a quotation guardrail. Actual cost is the net pre-tax cost stored on the physical inward lot.

Value	Owned by	Used for	Rule
MRP	Product SKU / tile variant	Quote and label	Required, editable and historically audited
Floor price	Product SKU / tile variant	Quote approval guardrail	Optional; visible to authorised commercial users
Supplier rate	PO line or manual GRN line	Purchase negotiation	Entered in the supplier UOM
Actual cost	Inventory lot	Stock value and realised margin	Net pre-tax base-unit cost; owner/admin visibility
GST	PO / quote transaction	Tax presentation	Optional; blank or 0 means without GST

Never copy today’s Product Master value backwards into an old transaction. Quotes, PO lines, GRNs and inventory lots keep their own governed snapshots.

MASTER DATA

Set MRP before the SKU is used

- MRP is mandatory for new product SKUs and tile variants.
- Floor price is optional and is the lowest ordinary quotation price.
- Actual cost is not maintained here; it comes from inward lots.
- MRP edits create history and audit records.

Owner/Admin task

Use Pricing readiness to complete legacy SKUs that predate the mandatory-MRP rule.

TILE MASTER

Design × size × finish creates the inwardable SKU

- Design owns the catalogue identity and images.
- Size owns geometry and coverage.
- Variant owns finish, packing, MRP per SQFT and immutable warehouse SKU.
- Labels and quotes show tile rates per SQFT even when fulfilment is in boxes.

Do not store cost here

The same tile variant can arrive from different suppliers or batches at different costs. Each GRN lot retains its own cost.

The screenshot shows the 'Tile Master' web application. At the top, there's a search bar with the placeholder 'Search SKU, customer, lead, quote...'. To the right of the search bar are several icons: a sun, a refresh, a chat bubble, a help icon, a bell, and a user profile icon labeled 'MP Marble'. Below the search bar, the breadcrumb 'CATALOGUE → STOCK IDENTITY → PHYSICAL TRACE' is visible. The main heading is 'Tile design, variant and display workspace'. A sub-header explains: 'Design owns code, name, governed brand and imagery. Size owns geometry. Variant owns finish, immutable warehouse SKU and packing. Every inward posts to a variant lot; every display is a separately audited asset.' Below this, there are five buttons: 'Design Excel sample', 'Import designs', 'Product SKU import', 'Size Master', 'Inward', and 'Labels'. A summary row shows four metrics: '0 Designs', '2 Variants', '0 On display', and '0 Missing images'. Below this is a navigation bar with three tabs: 'Design registry', 'Variant registry' (which is active and highlighted in black), and 'Display assets'. A search bar for the variant registry is present with the placeholder 'Find design for the variant form'. To the right of the search bar are two dropdown menus: 'All variant statuses' and 'Recently updated'. The main content area is titled 'Create inwardable variant' and includes a sub-header 'Design × size × finish = one permanent warehouse SKU.' Below this are three dropdown menus for 'Design', 'Size', and 'Finish'. The 'Design' dropdown has the option 'Select design'. The 'Size' dropdown has the option 'Select governed size'. The 'Finish' dropdown has the option 'Select from Finish Master'. At the bottom, there are two optional fields: 'Warehouse SKU (optional)' and 'Display code (optional)'.

Tile Variant Registry — searchable design, size and finish selectors with governed packing and per-SQFT MRP.

PURCHASE ORDER

Enter known supplier terms without delaying the order

- Select product/SKU with fast search.
- Enter quantity; supplier rate and UOM are optional on the PO.
- A blank rate may remain pending through inward and be completed days later.
- Apply one governed header discount if negotiated.
- Choose GST % or leave 0/blank for a without-GST PO.
- Any captured rate is audited, normalized and locked.

Keyboard

Type to filter, use ↑/↓ to move, Enter to select and Esc to close. This is the standard interaction for upgraded high-volume selectors.

The screenshot displays the 'Procurement' module of a software application. The top navigation bar includes a search bar with the placeholder 'Search SKU, customer, lead, quote...' and a user profile 'MP Marble'. Below the navigation bar, there are tabs for 'Overview', 'Demand', 'Purchase orders', 'Receiving', and 'History'. The 'Purchase orders' tab is active, showing a 'Create planned / replenishment PO' section. This section has a search bar with the placeholder 'Search SKU, design, alias or product' and a 'Clear draft' button. Below the search bar, there is a message: 'Start by searching a SKU, tile design, alias or item name. Add multiple lines, confirm supplier and terms, then create one auditable PO.' At the bottom, there is a table with the header '0 open purchase order(s)' and a link 'Open complete PO history'. The table is empty, and a message 'No purchase orders match these filters.' is displayed. The page number 'Page 1' is shown at the bottom right.

New PO — supplier rate, UOM, discount and optional GST are visible together before the order is saved.

4 · WORKED EXAMPLE

From supplier rate to lot cost

Illustrative training arithmetic; the system performs and stores the governed calculation at PO/GRN time.

Input	Value	Calculation	Stored result
Order	10 BOX	$10 \times 3 \text{ PC}$	30 PC
Supplier rate	Rs. 1,500 / BOX	$\text{Rs. } 1,500 \div 3$	Rs. 500 / PC gross
PO discount	5%	$\text{Rs. } 500 \times 95\%$	Rs. 475 / PC net pre-tax
GST	18% or 0%	Shown on PO totals	Does not inflate inventory cost
PO-linked GRN	Receive 10 BOX	Cost is inherited	Lot cost Rs. 475 / PC

PO-linked GRN

A rated line inherits its locked PO cost. A pending line may be inwarded without cost; its GRN and exact lot remain cost-pending until the permanent queue records the verified rate.

Manual GRN

Use only when no PO exists. The receiver must enter a positive supplier rate and UOM; that becomes the lot cost snapshot.

Find open work without one giant dropdown

- Overview shows daily purchasing and inward queues.
- Purchase Orders separates open commitments from history.
- Receiving guides PO-linked and manual GRN separately.
- Search, status filters, pagination and printable documents support daily volume.

Before receiving

Confirm supplier, SKU, packing, quantity, warehouse and physical batch. A received lot becomes commercial stock truth.

The screenshot displays the 'Procurement' interface within the 'MARBLE' system. The top navigation bar includes a search bar for 'SKU, customer, lead, quote...' and user controls for 'MP Marble'. The main header area features a large dark red banner with the text 'Buy, receive and trace—without losing the queue.' and a sub-header 'PROCUREMENT COMMAND WORKSPACE'. Below this, a row of buttons allows users to 'Complete legacy PO rates', 'New purchase order', or 'Receive goods'. A secondary navigation bar shows tabs for 'Overview' (selected), 'Demand', 'Purchase orders', 'Receiving', and 'History'. The 'LIVE OPERATING OVERVIEW' section, titled 'Today's procurement control', provides a snapshot of procurement status as of 2026-08-25. It includes five key metrics: 'Actionable demand' (0 already ordered), 'POs in motion' (0 draft, 0 partial), 'Purchase commitment' (Needs cost, 0 of 0 active POs valued), 'Receiving today' (0 units accepted), and 'Supplier exceptions' (0 overdue, 0 no ETA). Below this, the 'Today's procurement flow' section offers an 'Open register' link, and the 'Priority work' section lists items ordered by operational risk.

Procurement workspace — overview, demand, purchase orders, receiving and history use one governed lifecycle.

DELAYED COST

Complete verified supplier costs when they arrive

- Only owner/admin users can access the permanent queue.
- Unreceived and already received missing-cost lines stay visible.
- Enter positive rate, UOM and reason for only the rows known today.
- Received completion updates the original PO, GRN and exact lot without changing stock.
- Existing positive costs are never silently overwritten.

Empty is healthy

If no rows are shown, every non-cancelled PO line has a verified supplier cost.

The screenshot displays the 'Procurement' section of a software interface. At the top, there's a search bar labeled 'Search SKU, customer, lead, quote...'. Below this, a dark red banner contains the text 'OWNER-ONLY COST READINESS' and 'Complete legacy PO rates safely.' with a sub-note: 'No PO is deleted and no received lot is silently repriced. This queue only completes missing supplier rates before the first receipt, then locks the cost source to the PO.' To the right of the banner, a red box shows '0 open PO(s) need rates'. Below the banner, there are two main panels. The left panel has a search bar 'Search PO, supplier, SKU or item' and a green checkmark icon with the text 'Every open PO has a complete rate' and 'Nothing needs remediation for these filters.' Below this, it says 'Page 1' with navigation arrows. The right panel has a dollar sign icon and the text 'Choose a legacy PO' and 'Its missing rate lines will load here.' The interface includes a sidebar with various icons and a top navigation bar with 'MP' and 'Marble'.

Permanent delayed-cost queue — truthful state for supplier costs still pending before or after inward.

QUOTE PROTECTION

Missing MRP is a setup task, never Rs. 0

- Quote search marks a SKU whose MRP is not ready.
- The line remains visibly blocked from NRP/special pricing.
- A direct link opens the MRP readiness queue.
- Final payable shows setup required instead of a false zero.
- Saved PDFs expose only MRP and final selling price to the customer.

Tile presentation

Tile MRP and quoted rate are displayed per SQFT; box quantity remains the fulfilment unit.

The screenshot displays the 'Quote Studio' interface. At the top, there's a search bar and a user profile 'MP Marble'. Below this is a 'SHORTCUTS' bar with buttons for Search, Draft, Validate, and Close. The main area features a grid of eight blocks, each with a status icon and text: '1/1 LINES / ITEMS', 'Setup needed GROSS MRP', 'Setup needed NRP VALUE', 'Setup needed SPECIAL VALUE', 'Setup needed QUOTE DISCOUNT', 'Setup needed GST', '2 PRICING EXCEPTIONS', and 'Draft only READINESS'. Below the grid is another search bar and a 'Scan showroom item' button. The main product view shows 'GRO-23571003 · Grohe Eurostyle Basin Mixer' with a quantity of 1 and a unit of PC. It includes fields for 'BASE PRICING → NRP' (0, Waiting for MRP) and 'OPTIONAL SPECIAL PRICING' (0, No special, Waiting for MRP). At the bottom, there's a 'Draft' button, a '1 errors' indicator, and a 'Validate' button.

Quote Builder — an incomplete master blocks commercial output with an actionable setup state.

Who does what every day

Use named accounts. Do not share the owner login. Every price change and remediation keeps actor, reason and time.

Role	Daily responsibility	Cannot do
Purchasing	Create PO with optional supplier rate/UOM, discount and GST; print supplier document; monitor delayed costs	Invent an unverified cost
Inventory	Receive PO GRN; create manual GRN with positive rate; verify batch/location/packing	Override PO-linked cost
Sales	Quote from governed MRP; stay above floor or follow approval path	See owner-only actual cost
Owner/Admin	Complete MRP and permanent delayed-cost readiness; review audit and stock reconciliation	Delete commercial history

SHIFT-END CHECK

- Every missing PO cost remains visible in the delayed-cost queue.
 - Tomorrow’s quoted SKUs have verified MRP.
- All inward is posted to an exact lot and location.
 - Stock reconciliation has no unexplained critical row.
- Manual GRNs carry source reference and rate.
 - Cancelled work is voided with reason; nothing is deleted.

Support path: open Help from the application header, select Purchasing & inward or Master pricing readiness, then use the exact workspace link in the guide.
