

Complete user guide: customer promise to physical fulfilment

A role-based operating manual for sanitaryware, tiles and bathroom retail. It explains the exact actions, system controls and completion checks across Product Master, CRM, quotations, purchase, inventory lots, dispatch, returns, payments and audit.

01 Lead + intent	02 Quote + revision
03 Partial order	04 Reserve / procure
05 Pick + dispatch	06 Payment + return

Guide index

01 · Set up master data and products

02 · Quote tiles by area, piece or box

03 · Run lead, intent and quote revisions

04 · Scan showroom items into a customer intent

05 · Convert a quote in partial sales orders

06 · Procure shortages and receive stock

07 · Print labels, scan and manage lots

08 · Move stock to showroom display

09 · Pick, partially dispatch, deliver and return

10 · Track payments and documents

11 · Store, present and share files

12 · Count, reconcile and correct stock

13 · Use reports, approvals and audit

14 · Set up missing report data safely

15 · Sign in and protect your session

16 · Manage users, roles and settings

Set up master data and products

Create controlled brands, categories and generic SKUs; for tiles, separate design content, governed geometry and inwardable variants before any transaction uses them.

Design registry → Size geometry → Variant SKU → Opening stock / GRN →

Lot / display asset

Worked example - training data only

Training example: create design "Calacatta Ivory" once with its images, marble-look material, ivory colour, polished finish and wall/floor usage. Create Size Master "1200 x 600 mm" with calculated area. Then create the inwardable variant that combines that design, size and finish; the system issues its permanent warehouse SKU. Add supplier or old showroom codes as aliases, never by renaming the SKU.

How to complete it

1. Create brand, category, finish, UOM, tax and tile-size masters first.
2. In Tile Workspace, create the design once with brand, collection, material/type, surface/finish, colour, pattern, usage, description and images.

3. Create each sellable design × size × finish variant; review pieces per box, UOM, loose-piece policy, pricing and the permanent warehouse SKU.
4. Add supplier, legacy, barcode or showroom codes as aliases instead of renaming the warehouse SKU.
5. Download a fresh Excel template so bulk-import dropdowns match live master data; correct every validation failure before confirming.
6. Record opening stock or a PO/manual GRN against the variant to create exact lots; for tiles enter boxes plus optional loose pieces, batch, shade, caliber and grade.
7. Register a display as a separate asset. Choose a source lot only when physical stock is consumed, then print the display label.

Before you finish

- ✓ Design and size are reusable catalogue masters; Product-backed variant is the only stock identity.
- ✓ Warehouse SKU and design code are immutable after creation.
- ✓ An imported variant starts with zero stock.
- ✓ Display stock changes only through issue-to-display or return-to-lot actions.
- ✓ Stock exists only after a posted opening session or GRN.

Quote tiles by area, piece or box

Choose the commercial rate basis per quote line while the system continues to reserve and dispatch whole physical boxes.

PDF terms

TERMS

Prices are valid until the quote validity date.
Delivery depends on stock availability.
Installation, civil work and unloading are excluded unless mentioned.

Find display code → Choose Area / Pieces / Boxes → Enter need → System rounds boxes →

Customer sees billed UOM

How to complete it

1. Search the internal showroom code or SKU in Quote Studio.
2. Select Area, Pieces or Boxes on the tile line.
3. For Area, enter required area and wastage percentage.
4. For Pieces, enter requested pieces; the system rounds to full boxes.
5. For Boxes, enter the physical box count directly.
6. Review the billed quantity, physical boxes, rate/UOM, GST and quote image before saving.

Before you finish

- ✓ Area pricing needs positive coverage per box.
- ✓ Piece pricing needs pieces per box.
- ✓ Orders, reservations and dispatch always use the physical inventory quantity shown.

Run lead, intent and quote revisions

Capture the customer requirement, build room-wise selections, revise without losing history, and issue priced or selection-only PDFs.

Lead → Intent → Product selections → Quote revision → Customer decision

How to complete it

1. Create or open the customer and lead.
2. Record site, budget, timeline and requirement notes.
3. Create an intent and add Product Master SKUs room by room.
4. Open Quote Studio from the intent or create a direct quote.
5. Edit the room, customer-facing image, internal design code, rate, discount and GST.
6. In Quotation footer, select only the served-brand logos that belong on this customer document.
7. Save a new revision when commercial lines must change after discussion.
8. Download the priced quotation or selection-only PDF and mark it sent.

Before you finish

- ✓ Every line must reference an active Product Master SKU.
- ✓ Below-floor negotiated rates require approval.
- ✓ Commercial lines freeze after an order; use a revision for a new agreement.

Scan showroom items into a customer intent

Use the phone camera while walking the showroom with a customer. Each active MP label resolves to its governed Product Master item before it is added to the lead or intent.

Worked example - training data only

Training example: while showing a customer the master bathroom, scan the display label for Calacatta Ivory 1200 x 600. Confirm the returned warehouse/display code and image, set Room / use to "Master bathroom wall", enter the required area and wastage, then scan the next selected item. Create the lead with intent; later scans on the editable Intent page must be saved or submitted before leaving.

How to complete it

1. On mobile, open Leads -> New lead and select the customer, project, source and next action.
2. In Product intent, tap Scan showroom item, then Scan with camera. Allow camera access for the Marble Park HTTPS site when the phone asks.
3. Hold the MP QR inside the frame. A valid active product, lot or display label adds its linked Product Master item; an inactive or unknown label changes nothing.
4. Verify the image, permanent warehouse/display code, design, size, finish and rate shown on the new row. A display asset is non-sellable, but its linked Product Master variant is the commercial item added to intent.
5. Set Room / use and quantity. For area-priced tiles, enter required area and wastage; the system derives physical packs.
6. Scan more items as the customer walks the showroom. Search by code remains available when the camera is blocked or a label is damaged.
7. Choose Create lead + intent. On an existing editable intent, use Scan showroom item, review the new row, then Save draft or Save & submit so the scan persists.
8. From Labels & Scan, a successful scan can also open Catalogue, preload Add to intent, or start Quick quote; always confirm customer and pricing before saving.

Before you finish

- ✓ Sales users need only an authenticated account and their normal lead/intent permission; label printing permission is not required to scan.
- ✓ The camera starts only after a deliberate tap and stops after a successful read.
- ✓ The encoded QR value is never repeated on screen; the printed label code is the fallback.
- ✓ Scanning does not reserve, issue or increase stock.
- ✓ An existing intent must remain editable; submitted, quoted or cancelled intents are frozen for audit.
- ✓ Do not leave the page until the scanned row has been saved or submitted.

Convert a quote in partial sales orders

Convert only confirmed quantities, keep the remainder open, and avoid creating duplicate quotes for the same customer decision.

Pending Inward

SALES CONFIRMED, STOCK PENDING

Pending inward orders.

These rows are already confirmed in sales orders but are blocked until purchase order and GRN receiving completes. Once GRN posts, the system auto-reserves arrived stock and notifies sales plus dispatch.

Item Name	ORDERED	AVAILABLE	SHORTAGE	VALUE
INTENT-TILE-MROOQCA7 · E2E Intent Display Tile Marble Park Select · Tiles · Matt SO/2026/0010 · QT/2026/0015 · E2E INTENT CUSTOMER Marble Park Select - open	4	0	4	₹7,200
INTENT-TILE-MROOPLSQ · E2E Intent Display Tile Marble Park Select · Tiles · Matt SO/2026/0009 · QT/2026/0014 · E2E INTENT CUSTOMER Marble Park Select - open	4	0	4	₹7,200

TILE-AREA-MROOF4BP · Area pricing regression tile Lifecycle Test · Tiles · Matt				

How to complete it

1. Open the accepted quote and review Fulfilment.
2. Enter the quantity confirmed now for each line.
3. Choose cash or credit and record advance or terms.
4. Create the sales order; remaining quote quantities stay available.
5. Review reserved and backordered quantities.
6. Close the remainder only when the customer cancels it, with a reason.

Before you finish

- ✓ Selections cannot exceed remaining quote quantity.
- ✓ Each conversion is idempotent and creates its own dispatch job.
- ✓ Shortages automatically create purchase demand.

Procure shortages and receive stock

Turn open purchase demand into purchase orders, receive partial GRNs, and create traceable lots without breaking the customer order link.

The screenshot shows the 'Pending Inward' section of a software interface. It features a search bar at the top right and a user profile 'Devarsh' at the top right. The main content area is titled 'SALES CONFIRMED, STOCK PENDING' and 'Pending inward orders.' Below this, there are three summary cards: '4 OPEN ROWS', '12 QTY ORDERED', and '0 NOW AVAILABLE'. The main table lists four items with their respective 'ORDERED', 'AVAILABLE', 'SHORTAGE', and 'VALUE' columns. Each item has a 'Create PO / receive' button and a 'Dispatch board' button.

Item Name	ORDERED	AVAILABLE	SHORTAGE	VALUE
INTENT-TILE-MROOQCA7 · E2E Intent Display Tile Marble Park Select · Tiles · Matt SO/2026/0010 · QT/2026/0015 · E2E INTENT CUSTOMER Marble Park Select - open	4	0	4	₹7,200

Overview → Demand → Purchase orders → PO / manual receiving → History / allocation

Worked example - training data only

Training example: receive 10 boxes of Calacatta Ivory 1200 x 600, 3 pieces per box, plus 1 permitted loose piece. The GRN posts 31 base pieces into one exact lot with supplier batch, shade, caliber, grade, unit cost and location. Labels are created from that posted GRN; the label job does not post the stock again.

How to complete it

1. Start on Procurement Overview. Its KPI cards and schedule read the live demand, PO and GRN registers; purchase commitment value includes only POs with a captured commercial value and identifies missing costs instead of treating them as real zero spend.
2. Open Demand for customer shortages or Purchase Orders for planned replenishment. Search, filter and sort the server-paged queue; select only active demand and choose a governed supplier.

3. For a planned PO, search the Product/variant code and enter quantity. Tile lines accept boxes plus allowed loose pieces and snapshot the pack conversion.
4. Record expected date, unit cost, discount, GST and notes, then download the supplier PO PDF.
5. In Receiving, choose the PO and enter only quantities physically delivered; every receipt line starts blank and never defaults to the outstanding balance.
6. Capture supplier challan/bill, stock location, damaged pieces, batch and tile shade/caliber/grade. Use Manual GRN only for a real delivery without a prior PO and record the reason.
7. After posting, open History and use Create labels on the GRN. It hands the exact accepted lines and lots to the Physical Identity Desk without reposting stock.
8. Review exact lots, Pending Inward allocation and stock reconciliation. The form clears after success.

Before you finish

- ✓ Never add live stock directly to balances.
- ✓ Received quantity cannot exceed the remaining PO base quantity.
- ✓ Boxes and loose pieces convert to base pieces with an immutable snapshot.
- ✓ Damaged quantity is isolated from available stock.
- ✓ Every inward retains supplier, PO/manual reason, GRN, variant, lot, location, actor and source links.

Print labels, scan and manage lots

Create auditable labels from recent GRNs, exact lots, products or display assets; print only the chosen labels and verify the real branded QR payload before movement.

MP Labels & Scan

Q Search SKU, customer, lead, quote...

INTERNAL TRACEABILITY

Labels and QR scan desk

Non-GS1 labels identify the exact Product Master SKU, inward lot or showroom display. Reprints and every scan remain in the audit trail.

LB/2026/0001-0001

Label jobs

Print opens an exact preview and increments the reprint counter.

Posted GRN / display → Select exact subject → Create unique labels → Print and confirm →

Scan and trace

Worked example - training data only

Training example: open the recent GRN for Calacatta Ivory, select its exact lot and create 10 carton labels. Prepare a run for only labels 1-10, print on the chosen physical template, and confirm only after paper is produced. A salesperson may later scan any active label to open Catalogue or add the linked variant to intent; no stock changes during scan or print.

How to complete it

1. After posting a PO or manual GRN, use Create labels in Procurement History or open Recent GRNs in the Physical Identity Desk.
2. Select accepted receipt lines and verify the product image, permanent code, exact lot, location, accepted quantity and pieces per pack.

3. Confirm the number of physical packs or items that need unique labels. The suggestion is derived from accepted pieces and pack size but remains an explicit operator decision.
4. For a shelf, existing lot, carton or showroom asset, use Other subjects and search the authoritative Product Master, lot or Display Asset register.
5. Open Print & reprint, select the exact unique labels, physical paper/template and reason. A preview creates an audited prepared run but does not mark anything printed.
6. In the isolated print screen, confirm only after the printer produces the labels. Cancel or failed leaves print counts unchanged.
7. In Scan & verify, tap Scan with camera on mobile or use a handheld scanner/manual code. Camera access starts only after the tap and stops after a successful read.
8. Review the full product, lot, batch, location or display identity. Open Catalogue for detail, Add to intent for guided lead intake, or Quick quote to preload Quote Studio; customer and pricing checks are still required.
9. Void a damaged or superseded physical label with a reason; create a new print run for every reprint.

Before you finish

- ✓ Creating or printing labels never posts stock; only a GRN, opening session or governed movement changes inventory.
- ✓ Every QR encodes MP-LABEL:<unique label code>; the MP centre mark is branding and the human-readable code remains the fallback.
- ✓ Reprints retain the same physical identity and add print audit history.
- ✓ A display label identifies a non-sellable showroom asset and must never be treated as available stock.
- ✓ Vendor-provided displays create no stock movement; displays issued from a received lot post an audited lot issue and can return only to that original lot.

Move stock to showroom display

Create one non-sellable display identity from an exact received lot, or register a genuine free vendor sample without changing stock.

Worked example - training data only

Training example A: issue 1 piece from the Calacatta Ivory GRN lot to display code WALL-A-014 in zone Tile Gallery, position Bay A. Available stock reduces by 1 and the display remains linked to the original lot. Training example B: register a free vendor sample with its own display code and position; no GRN, lot or stock quantity is created.

How to complete it

1. For anything purchased or intended as saleable stock, post the PO/manual GRN first so the physical receipt has a governed lot.
2. Open Display Assets and choose From inventory. Search the Product Master item, choose the exact available lot and location, enter the quantity, display code, showroom zone and position.
3. Saving posts one display_issue out of that exact lot, creates the non-sellable display asset and prepares its QR label job.
4. Use Vendor sample only for a free/non-stock physical sample. This registers the asset but creates no GRN and no stock movement.
5. Print the display QR from Labels & Scan and attach it to the matching physical sample.
6. Use Inspect and Maintenance for routine lifecycle updates. Remove with a reason; a stock-issued display can return only its complete issued quantity to the original lot.

Before you finish

- ✓ Purchased goods never bypass GRN.
- ✓ A display is always non-sellable and excluded from available stock.
- ✓ Every stock-issued display retains product, source lot, location, quantity, actor and ledger posting.
- ✓ A vendor sample never increases stock.
- ✓ Every lifecycle change and reprint retains audit history.

Pick, partially dispatch, deliver and return

Pick exact lots, create multiple challans against one order, prove delivery with OTP, and return stock to its original traceable lot.

The screenshot displays the 'Warehouse Fulfillment' interface for a 'Dispatch' job. The top navigation bar includes a search bar, a refresh icon, a notification bell with 38 alerts, and a user profile for 'Devarsh'. The main header shows 'WAREHOUSE FULFILLMENT' and the title 'Pick, pack and partial dispatch'. Below this, a descriptive text states: 'Each batch starts from reserved stock and names the exact inward lot and location. Pack less than requested to dispatch a partial batch; the balance stays reserved for the next pick.' Action buttons for 'Pending inward' and 'Scan labels' are present.

The interface is divided into two columns, each showing a list of order lines with their status and progress indicators (1 ready, 2 picking, 3 picked, 4 packed, 5 completed, 6 challan created).

- Left Column:**
 - Order line: SQ/2026/0011, Area Quote Notification Customer AREA-STOCK-MROOQPT8, Area smoke site. Status: 1 ready.
 - Order line: Area Smoke Backorder Shower, Ordered 1 · remaining 1. Status: ready.
 - Order line: PLANT-MROOHADH · Production Smoke Plant PROD-HARDEN-MROOHADH. Status: ready.
 - Order line: CH/2026/0005 · dispatched. Status: dispatched.
 - Order line: SQ/2026/0009, E2E Intent Customer, E2E Intent Site. Status: 1 ready, 1 inward pending.
 - Order line: E2E Intent Stock Basin Mixer, Ordered 2 · remaining 2. Status: ready.
 - Order line: E2E Intent Display Tile, Ordered 4 · remaining 4. Status: pending inward.
- Right Column:**
 - Order line: SQ/2026/0010, E2E Intent Customer, E2E Intent Site. Status: 0 ready, 1 inward pending.
 - Order line: E2E Intent Display Tile, Ordered 4 · remaining 4. Status: pending inward.
 - Order line: PLANT-MROOHADH · Production Smoke Plant PROD-HARDEN-MROOHADH. Status: ready.
 - Order line: CH/2026/0004 · dispatched. Status: dispatched.
 - Order line: SQ/2026/0008, Area Quote Notification Customer AREA-STOCK-MROOLWD4, Area smoke site. Status: 1 ready.
 - Order line: Area Smoke Backorder Shower, Ordered 1 · remaining 1. Status: ready.
 - Order line: PLANT-MROOHADH · Production Smoke Plant PROD-HARDEN-MROOHADH. Status: ready.

Each order line has a 'Confirm delivery' button and a 'Create' button. A note at the bottom of the right column states: 'Pending-inward lines remain outside this pick list and will become available after PO/GRN receipt.'

Order line → Exact-lot pick → Pack → Challan → OTP delivery → Return / balance

How to complete it

1. Open the order's dispatch job and review ready, backordered and already dispatched quantities.
2. Select the exact lot and quantity to pick.
3. Confirm pack quantities and create the delivery challan.
4. Repeat later for remaining items; do not create another sales order.
5. Send and verify delivery OTP to close the challan.
6. For a return, select the original dispatch line, reason, disposition and received quantity.

Before you finish

- ✓ Cannot pick more than available or ordered balance.
- ✓ Every challan is partial-safe.
- ✓ A return must reference the original dispatch line and restores the correct lot when saleable.

Track payments and documents

Record cash advances or credit terms, monitor balance due, and retrieve the correct quote, order and receipt documents.

Sales order → Advance / credit → Receipt → Balance due → Document center

How to complete it

1. Choose payment mode during order conversion.
2. For cash, enter the received advance; for credit, confirm terms and due date.
3. Post later receipts against the sales order.
4. Review payment status and remaining balance.
5. Open Document Center for quote PDF, sales order PDF and generated records.

Before you finish

- ✓ Receipt posting is idempotent.
- ✓ Amount cannot exceed the order balance.
- ✓ Credit orders remain visible until settled.

Store, present and share files

Keep catalogues, product imagery, videos and working files in one searchable library with controlled public presentation links.

Upload files → Categorise → Preview → Create expiring link → Revoke / archive

How to complete it

1. Open Documents and choose Add files.
2. Drop up to 20 files, select a category and add useful collection or brand notes.
3. Search or filter the library, then select a file to preview it.
4. For customer presentation, choose an expiry and whether to show a download button.
5. Create and copy the public link; recipients do not need a login.
6. Revoke a link after use or archive the file to revoke all active links together.
7. Owners can permanently delete an archived file when its storage must be reclaimed.

Before you finish

- ✓ PDF, image, browser video and audio formats preview inside the system.
- ✓ Office documents download in their native format.
- ✓ Archived files stay recoverable and cannot be opened from old public links.
- ✓ Permanent deletion is restricted to owners/admins and only works after archive.
- ✓ Uploads, edits, shares, revocations, archives and deletions are recorded in System Audit.

Count, reconcile and correct stock

Use controlled counts, approvals and reconciliation instead of editing balances, preserving an auditable inventory ledger.

Freeze scope

Count

Review variance

Approve / post

Reconcile

How to complete it

1. Create a stock count session for a location or scope.
2. Enter counted quantities by scanned lot.
3. Submit the count and review variance.
4. Approve and post the adjustment with reason.
5. Open Reconciliation to confirm lot, location, ledger and aggregate balances agree.

Before you finish

- ✓ Only posted sessions affect stock.
- ✓ Adjustments require reason and permissions.
- ✓ Reconciliation should show zero critical differences before go-live.

Use reports, approvals and audit

Use the five report suites, follow every metric to its source, and resolve readiness or operating exceptions without editing facts inside a report.

Operational event → Approval / audit → Report → Exception action

How to complete it

1. Start with Owner, Sales, Finance, Inventory or Operations according to the decision you need.
2. Choose one of the four primary report tabs; additional specialist views stay behind Show more.
3. Set the business-date range and applicable owner, location or vendor filter.
4. Open Sources & definition to verify date basis, freshness, source tables and coverage.
5. Use a register row to open the authoritative customer, product, order, invoice, lot or audit record.
6. If a view says Needs setup, follow its action to Report Data Readiness instead of entering an estimate.
7. Save a personal view only after filters, metrics and columns match the repeat decision.
8. Use isolated Print or governed CSV export for a point-in-time copy.

Before you finish

- ✓ Reports are decision surfaces, not stock-editing tools.
- ✓ Zero means an eligible governed value of zero; unavailable means the required source is absent.
- ✓ Role permissions determine visible suites, data scope and allowed export.
- ✓ Coverage warnings remain visible when historical facts cannot be reconstructed.
- ✓ Audit records are append-only evidence.

Set up missing report data safely

Identify whether a missing metric already has an operating source, needs a governed Marble Park workflow, or must come from accounting—without creating a generic financial shortcut.

How to complete it

1. Open Data readiness from Reports; only owners and administrators can manage this page.
2. For Targets, select the governed metric and month, enter the approved amount and retain an approval or planning note.
3. Saving the same metric and month creates a new version and supersedes the old one; use Void only with a clear reason.
4. For product and tile exceptions, follow Correct Product Master and update the authoritative category, brand, finish, UOM, HSN, cost, size or pack fields.
5. Do not backfill historical quote or invoice cost using today's cost. New quote lines snapshot Product Master cost and new invoice lines snapshot the dispatched lot cost automatically.
6. Treat purchase orders and GRNs as commitments and receipts—not supplier bills or payments.
7. Connect a governed accounting source or implement a dedicated AP/GL subledger before enabling supplier aging, P&L, cash flow or balance sheet.
8. Return to the report and review its coverage label; uncovered historical rows remain explicit.

Before you finish

- ✓ Targets are positive, company-level, monthly and versioned.
- ✓ Target revisions and voids appear in System Audit.
- ✓ Product corrections happen only in Product, Tile and Size masters.
- ✓ Supplier AP requires invoices, payments and allocation lineage.
- ✓ Accounting statements require chart of accounts, journals, expenses and opening balances.
- ✓ No report displays an estimate as an accounting fact.

Sign in and protect your session

Use your own account, understand the 15-minute inactivity safeguard, and recover cleanly when a session ends.

How to complete it

1. Sign in with your assigned email and password; never share the owner account.
2. Marble Park ends every authenticated session after exactly 15 minutes without real keyboard, pointer, touch, input or scroll activity.
3. Background refreshes, charts and polling do not keep a session alive.
4. When the warning appears, choose Stay signed in only if you are still at the device, or Sign out now before leaving.
5. Signing out in one browser tab signs out the other open Marble Park tabs too.
6. After an inactivity sign-out, sign in again and use the safe return link to reopen the protected page.
7. Change a suspected or exposed password immediately from Profile; administrators can issue a temporary reset and all older sessions are revoked.

Before you finish

- ✓ Do not leave unsaved form entries during the expiry warning.
- ✓ Closed or stale tabs cannot continue requests after the server deadline.
- ✓ The browser does not store the login token in local storage.
- ✓ A deactivated account and every expired or revoked session are rejected by the server.

Manage users, roles and settings

Issue named user accounts, apply least-privilege roles, test access, and maintain company/document settings.

How to complete it

1. In Settings, maintain the company logo, address, GSTIN, phone, email, quotation title, default terms, bank details and footer.
2. Choose Light, Dark or System appearance; System follows the device preference.
3. Create one named account per staff member with a temporary password of at least 12 characters.
4. Assign Sales, Office, Inventory, Dispatch, Manager or Owner role.
5. Apply an override only when the standard role needs a documented exception.
6. Test the user's navigation and one allowed action.
7. Deactivate departed users instead of reusing accounts; deactivation revokes their active sessions.

Before you finish

- ✓ Never share the owner login.
- ✓ Users cannot grant permissions they do not control.
- ✓ Password resets, password changes, role changes and deactivation are auditable.
- ✓ All sessions use the same 15-minute server-enforced inactivity limit.

Separate workflow videos

1. Set up master data and products

Create controlled brands, categories and generic SKUs; for tiles, separate design content, governed geometry and inwardable variants before any transaction uses them.

[Open MP4 walkthrough](#)

2. Quote tiles by area, piece or box

Choose the commercial rate basis per quote line while the system continues to reserve and dispatch whole physical boxes.

[Open MP4 walkthrough](#)

3. Run lead, intent and quote revisions

Capture the customer requirement, build room-wise selections, revise without losing history, and issue priced or selection-only PDFs.

[Open MP4 walkthrough](#)

4. Convert a quote in partial sales orders

Convert only confirmed quantities, keep the remainder open, and avoid creating duplicate quotes for the same customer decision.

[Open MP4 walkthrough](#)

5. Print labels, scan and manage lots

Create auditable labels from recent GRNs, exact lots, products or display assets; print only the chosen labels and verify the real branded QR payload before movement.
